

Aerial Work Platform

Aerial Work Platforms - There are many accessories for forklifts that can be utilized in order to help expand the capabilities of your lift truck and allow you to lift items, handle materials with greater ease or to complete clean-up tasks.

Some attachments were specially used for the blades themselves. For instance, fork extensions could be used whenever you need much more fork length, that increases lifting capacity. Blade extensions come in lengths ranging from forty eight to one hundred twenty inches. Triangular or rounded attachments are one more kind used whenever moving rolled material in order to ensure it does not roll off of the traditional flat blades.

Examples of lifting attachments include pivoting and telescoping boom or crane accessories. They could come in several various kinds and are most often meant for transferring poles, metal bars, lumber and different kinds of bulky items. Additional accessories like various styles of hooks and hook plates are existing in order to pick up stuff utilizing a sling or chain. Slab lifters and magnetic filters are other items that can be used with hook accessories. Slab lifters are specialized accessories which are designed for picking up various materials which are delivered in a slab or sheet format. Rug rams or carpet poles are other lifting tools that connect to your forklift to be able to make transferring rolls of carpet a lot easier. The attachment hooks onto the lift truck's blades and has a pole which goes through the center of the carpet roll.

There are several other kinds of forklift attachments that could be meant for facility maintenance such as snow blades. These blades connect to front end loaders and can move materials like for example dirt, soil and snow. Other popular cleanup attachments consist of standard sweepers and magnetic sweepers. Standard sweepers includes a broom which the lift truck blades hook onto for sweeping large spaces like warehouse, factory floors and parking lots. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is utilized in places where there is lots of metal debris such as on shop floors for instance. Sweepers have widths up to sixty inches and this surface area makes clean up easy and fast.

Material spreaders are other attachments utilized on forklifts. These spreaders are useful for a range of applications such as spreading fertilizers, insecticides, seeds, ice melt, rock salt and pellets.

Work platforms are another optional lifting accessory which many companies use day after day. The platforms range in size from 36" x 36" to up to 60" x 60". There are a few models offered which are capable of folding up and storing into a smaller space. Work platforms are designed to raise staff up to an overhead location utilizing the forklift. Larger platform models have added space for employees to be able to carry tools and other essential things intended for the task. Often work platforms are made of steel or ploy material.
